News of Mine, of Prospect, of Furnace and of Mill.

SLIMES TREATMENT AT LOCAL PLANTS

Prof. Overstrom, Inventor of the Table of His Name, Goes After a New Achievement.

N ROF. GUSTAVE A. OVERSTROM, te whom the metallurgists of the West are indebted for the Overfrom table, successfully employed

a the reduction of low-grade coppednearing ores, says he is developing a method that will enable him to overome the moisture in the silmes, and that within two years he expects to emonstrate that it will be as easy to handle this portion of the product from ores requiring concentration as it is the original. The Overstrom table now in use at the Utah Copper company's Ringham canyon plant is perhaps the only rival the Wildey table has ever had, and while the management of that big plant has not made its final order yet, it is not unlikely that Mr. Over-strom's device will divide honors with

Prof. Overstrom's endeavors in behalf of the treatment of slimes not only in-ierests the miners of Bingham, but will appeal to those of Park City, and results of his experiments will be awaited with much interest throughout the State. In his opinion he will have definite conclusions to report to the definite conclusions to report to the mining world at the expiration of two years. The miners are to be congrau-lated that one of such eminent service to them is prepared to devote his time to their interests.

MAKING NICKEL ORE IN FAR OFF-NORWAY

With the shaft dropping down in solid mass of ore and the future of the undertaking practically assured, Willard Christopersen, who has been superintending the development of properties acquired by his father, Senafor Smoot and others on the west coast of Norway, came in from his distant camp yesterday, and will depart again in July Mr. Christophersen brought with him samples of ore that afford a most interesting lesson on the minerals of that country, the assays testifying to the presence of 4 per cent nickel, with of that country, the assays testifying to the presence of 4 per cent nickel, with some cobalt and copper, the whole having a valuation of \$60 per ten. To market this, Mr. Christophersen says, the intention of the company is to construct a tramway a distance of about a half mile, between the mines and the leading station on the water, and to that end construction will begin immediately he returns to the camp. The diggings over there, says Mr. Christophersen, are most interesting. Two hundred years ago they were prosecuted for the iron contained in them, and of that metal were very productive. Then came the nickel discoveries, and it now looks as if the camp would be made as productive of this metal as in any nickel-bearing camp in the world. Associated with Mr. Christophersen are some of the best-known people in Utah, and results best-known people in Utah, and results are blicing looked forward to with much

BRANCH LINE FOR ORES OF GOLDFIELD

A letter from Arthur Hudson, superintendent of the Twilight group of prospects adjoining the Belcher mines out of Tonopah, Nev., says that a contract has been let for the construction a branch line of railway from the main line between Rhoads and Tonopah to Goldfield and that the distance between his properties and transportation will be reduced to less than two miles. This, he says, will enable the Belcher to market over 2000 tons of second-class ore which has been languishing on the Beicher dump since it was, in the '70s, overated as the Gen. Thomas mine. Mr. Hudson also writes that the man-agement of the Beicher will begin the forwarding of first-class ores to the station at Tonopah within the next few He reports about eight carloads now sacked and ready for shipment and expects to busy the teams for some days. To Gold Bountain and Goldfield the extension means everything in the vocabulary of advantage.

THE DIAMOND STRIKE IN A BONA FIDE ONE

Superintendent Raddatz of the Honerine, who was in from that Stockton bonanza yesterday, says the management of the Black Diamond is too modest in its declination to accept the recent development in the cross-cut to Bullion ground as a strike. It is not a solid body of ore, said Mr. Raddatz, but there is ten feet of mineral between walls, some of which is good enough for any market, while the whole affords a good mill average.

On the arrival of the Chillan mill, which is due said of the Chillan mill,

which is due early next month, the out-put of the Honerine, said the superin-tendent, will be increased to 300 tons

The new development in the Galena King is a most important one, and while the ore bory is not a large one, its quality compares favorably with the best that has been encountered in the capture.

MONTANA PROMISES A BIG DIVIDEND

Reports from Tonopalı foretell a most substantial offering at the counters of the Montana Mining company next month, and while the amount has not been decided on nor the day fixed it is sail that it will not be less than \$100,000 It is said of the company's stocking, indeed, that its contents have been swelled to approximately \$200,000, this sum derived from ores that have been taken out in the prosecution of development. The shares on yesterday's market advanced to \$2.50, a pretty compilment to the management of Charles E. Knox, who has presided over the undertaking from the first. undertaking from the first

FINE GOLD GRAVEL ON GRAND RIVER

Charley Brown will leave for the Grand river this morning, where he goes to make the first clean-up from placers that are being operated by him slong that stream. It is the intention of Mr. Brown during his absence to install equipment on his placers that will enable him to sluice at least 1000 yards of gravel daily.
"The gravel at this time," said Mr

Brown yesterday, "is maintaining an average better than \$1 per cubic yard, and I hope to be able to provide means with which to pay dividends the pres-

Above him and along the sauce stream Above him and along the same stream are a number of parties engaged in the active shicing of gravel, not a little of which shows a valuation exceeding \$2 a cubic yard. It is the intention of Mr. Brown and his associates to put in such machinery as may be necessary to economically reduce a much greater tonnage than at present and to that end he will place orders on his return from the southern country. His neighbors on the placers above are making a fine record and the gold output from that ord and the gold output from that source promises to add not a little to the orniferous resources of this State during 1994.

THE DAY ON 'CHANGE

The day on the mining exchange closed on the sale of 12,800 shares of stock, that brought \$3575, and with the market generally stronger. Mammoth of Tintigenerally stronger. Mammoth of Tintic seized the lead and moved rapidly up to \$1.27, while Montana of Tonopah sprinted to \$1.59, and Daly-Judge of Park City to \$4.50. Swansea of Tintic, on a report that it is to begin the active forwarding of ore again, and for which Manager Geddes says there is no foundation, moved up rapidly to 59 cents a share, while Sacramento, which will distribute the usual dividend on July I, changed hands at 15 cents, with Con. changed hands at 15 cents, with Con.
Mercur changing hands around 24 cents.
The remainder of the shares were dull
and inactive, the day closing on the
following market. following market:

A standing reward of Ten Dollars (110.00) is offered for the arrest and conviction of anyone caught stealing THE TRIBUNE.

WAS A LISTLESS ONE BIG COPPER MINES IN THE FAR EAST

Charles C. Jones, consulting engineer of the Copper Mountain company, whose properties in Shasta county, Cal. were last year productive of a volume of copper approximating thirty millions of pounds, came in from the west yes-terday and is seeing the town as the guest of John McChrystal. While MMr. Jones is not disposed to go into details concerning the operation of his prophe was graceful enough to admit that it is one of the great producers of the State of California, and promises o add materially to its output the pres-

The Balaklala group of mines, owned The Balaklaia group of mines, owned by Kimberly and Buehl of Pennsylva-nia, together with Salt Lake parties, has responded to developments in a manner which makes it a statuesque manner which makes it a statuesque rival of the Copper Mountain. Under the supervision of Grant Snyder, enormous discolsures have been revealed, according to Mr. Jones and while the ores are of low grade, the owners have experienced no difficulty in detecting the presence of a fortune. It is understood that they will begin the erection of equipment with which to reduce these ores before the close of the year. Over at the Builty Hill, owned by Capt. DeLamar and managed by Hartwig A. DeLamar and managed by Hartwig A Cohen of this city, the output of cop-per, gold and silver-bearing bullion continues as steadily as does it from the reduction works of the Copper Mountain. Mr. Cohen has shown himself as capable in the development of this proposition as he did in the development of the Golden Gate at Mercur, and not a day but he is adding to the contents of the Capable's exchange. contents of the Captain's exchequer.

TO ADD CYANIDE TO REGULAR PLANT

his desk yesterday morning after making a clean-up of gold dollars at the Gold Ridge mill, out of Baker City, Or., says that to more efficiently handle the ores of that proposition a cyanide plant must be added to the stamps, and that he will place an order to that end at an early date. Of the mine, he says that it is looking up very satisfactorily, and that he will begin the production of dividends the present year. The ores are maintaining a good general average and there is now exposed a volume of rock of the value of many thousands of dollars.

The region in which the Gold Ridge is the prominent figure is showing a good deal of activity the presenta year, and Oregon is promised a new source of considerable revenue from its diggings.

A SALT LAKE BOY ORGANIZES A COMPANY

Kenneth Donnellan, the ploneer brokenneth Donnellan, the pioneer bro-ker of Tonopah and Goldfields, returned from a business trip to San Francisco last evening, says the Journal of Re-no, Nev. Mr. Donnellan and others have lately incorporated the Midnight Gold Mining company of Lone Moun-tain and will immediately begin develtain, and will immediately begin devel-oping the property. W. Tacher, man-ager of the Bonanza Mining company of

Oregon, is president of the company, and Mr. Donnellan is secretary. The development of the property will increase the value of mining claims at Lone Mountain, and the camp will forge to the front rapidly.

Utah the Leader in Boston.

Special to The Tribune.

BOSTON, Mass., June II.—Utah continues the leader in the local market, both in activity and breadth of action. This stock has absorbed about all of the attention both of traders and the public. The balance of the list was by no means neglected. Prices were firm at an advancing figure and a firm undertone is to be found all around. The feeling continues to improve and many expressions are heard that the copper share market will be better. Hornblower & Weeks, brokers, in State street, Boston, and 10 Wall street, New York, furnish the following quota-Special to The Tribune.

TONOPAH'S OUTPUT LEVY ON FURNACES

Local Resources Taxed by Increased Shipments From the Nevada

HE necessity for two more furnaces at the American Smelting and Refining company's plant is due, perhaps, to no influence so much as to the increased output of the Ponopah mines. Under the contract with the various producers, the American will next month be receiving 19 per ent more ore than is coming from that region today. The Tonopah company, enior, the Montana-Tonopah, the Belont, and a cluster of others will begin to testify to the resources of that camp. To meet their requirements the American Smolting and Refining com-pany is naturally levied on for at least the capacity of two more furnaces. While it does not mean a great deal in the employment of labor to the State of Utah, it is at least gratifying to know that the valley has been made the des-tinution of an output that promises to empare favorably with the Comstock

John Hays Hammond, the eminent mining expert, who made an exhaustive examination of the region, is authority for the above statement, and perhaps no one will be audaclous enough to challenge Mr. Hammond's predictions. The completion of the railroad into the amp next month will enable it to as sert its merits. It is understood that the Tonopah company alone has sufficient ore in reserve to monopolize the traffic facilities of the new road for an extensive period, and that the Montana-Tonopah intends to come forward as a close second for that monopoly,

MAY CLOSE OPTION ON GOLD-COPPER CLAIMS

special to The Tribune

CALIENTE, June 21.-Gustaff Hoeb lein, a mining expert from Los Angeles, passed through camp today, en route to Denver, where he will consult with his issociates regarding taking up a bond which they have held for the past six nonths on a group of gold-copper laims located about eighteen miles south from Moapa. The group is known as the Lone Star and have been worked for years past by the ubiquitous prospector, free gold having been found at grass roots, but at a depth of lifty to sixty feet the ore went base and while retaining high values, was not tracta-ble for working in an arasta.

Mr. Hoeblein relocated this group about a year ago with his partner John Fink, now deceased, and they bonded it o Denver men, who sent Mr. Hoeblein and Herman Goldsmith of Cripple Creek down to the mines to expert them and take out samples of the ore. Mr. Goldtake out samples of the orc. Mr. Gold-smith is still at the mines, having sent Hoeblein ahead with some sacks of samples, going from \$16.20 gold and 45 per cent copper to \$78 gold and 62 per

Mr. Hoeblein says that there is an immense deposit of the ore of the minimum value running through the entire group, while the maximum values are found in a five-foot ledge cropping out for more than 600 feet on the Sunrise claim, one of the group. The bond on the eight claims comprising the group Ernest Bamberger, who reappeared at his desk yesterday morning after making a clean-up of gold dollars at the six months later, and the remaining one-half payable in one year. Mr. Goldsmith has recommended closing the option and taking over the group

Fred Foster has completed location twelve-foot ledge of low-grade gold ore, cross-cutting the ledge three feet and also a ledge of lead carbonates nearly twenty feet wide on the northeast end

Frank Palmer is taking out rich free gold ore from his Louisiana Purchase laim, one and one-half miles south of the San Pedro track, four miles east of

It is reported here that Mr. McNa-mee of De La Mar has sold his interest in the Callente Gold Mining company claims here for \$10,000.

GOLDFIELD LISTENS

TO STEAM WHISTLE

The News of Goldfields says: The toot of the whistle of the January's steam hoist sounded good yesterday, for it means that this young bonanza will soon be doubling and tripling its present output. The vertical shaft has been timbered, the guides will be in and the engine and holst working tomorrow or Sunday. During the week the lessees have been piling up ore under ground, only hoisting what could be handled through the old incline shaft. The shipping ore is increasing in value, the average of the screenings on Wednes-day being \$1281 a ton. The most valuable carload yet shipped from the January went out this week, and will net the compan y\$25,000 or more. Every portion of the mine is looking well, but a two-foot streak found in the 112-foot level, it is said, will nearly equal in value the bonanza ore of the Ker-nick & Boes lease on the Jumbo. The nick & Boes lease on the Jumbo. The development of this streak will be

Mining Company Incorporated.

Special to The Tribune.

PROVO, June 21.—The Tidal Wave Mining and Milling company filed articles of incorporation with the county clerk today. The names of the incorporators are James Pierce. Hugh Pierce William Pierce, J. N. Christensen, George Elliott, June M. Pierce, E. White and Andrew Pierce. The property consists of ten claims in the Wasaath mountains, about three miles southeast of Provo.

A bond and lease were placed.

Mining Company Incorporated.

Assays on samples of ore brought in from the Pieche-Nevada Con. Vestorialy St.69 gold per ton.

Elko Free Press: Another rich strike of copper ore has been made at Bullion. It adjoins the Sylvania and was discovered by Bob Skaggs while doing assessment work. The ore carries both copper and sliver, and Bob is going to copen it work on the new find.

Newt Dunyon has submitted a submitted a few the Counter B.

A bond and lease were placed on file in the County Recorder's office, in which H. W. Owen, T. J. Owen and W. J. Ballinger of Salt Lake bond to W. S. Lyle of San Francisco the North Star No. 1 mining claim, situated in the Silver Lake Mining district. American Fork canyon. The claim adjoins the Ontario patented claim on the north. The consideration was 13000 and 25 per cent of the net proceeds of all shipping ores that may be marketed and sliper cent of miling ores that may be marketed and sliper cent of miling ores that may be milled and sold. The bond is given for one year and is payable in Salt Lake City.

HE SAW MINES ON SAN PEDRO

James X. Ferguson has returned from a trip over the San Pedro route and says that it is, perhaps, as resourceful as any undeveloped country, untraversed by a railroad. At Moapa he was shown samples of ore from a large number of prospects, each of which should be developed, by systematic effort, into a mine. There was gold, silver, lead and copper evident in all of the samples, and while he did not have an epportunity of making personal examination into the various ledges from which they came, the samples were of sufficient size to indicate that they occur in not a little abundance. abundance.

Mr. Ferguson verifies that fourteen miles out of Moapa there have been some very important discoveries, the some very important discoveries, the ores running well up in copper and not a little in gold. The intense heat, not less than 110 degrees, caused him to forego a trip through Los Angeles, which had been originally planned.

At Good Springs the work of George Gunn, representing the American Smelting and Refining company, is being viewed with lively interest not only. ing viewed with lively interest, not only by the prospectors, but by the railroad company, itself. And the prediction is quite general that if Mr. Gunn comquite general that if Mr. Gunn commends to his company the purchase of the properties upon which he has been engaged, it will mean the development of a great camp. To date, some very good ore has been shown up in the property, and it is said of the ore that it carries sufficient gold to pay the entire cost of praeduction. Mr. Gunn is absent from the city at present, and it is assumed that upon his return the fate of his undertakings will be made known. his undertakings will be made known,

IMPORTANT STRIKE AT THE POINT MINES

The rumors have been frequent and persistent for the past five days of an important and what appears to be an extensive stirke of ore at the Point mines four miles west of town, which have been worked by the Pioche Nevada Mining company, with C. E. Rives, superintendent, under a bond from Henry Wolland and T. J. Osborne since February last, says the Record of

Pioche, Nev.

The ore seams are numerous in that vicinity that the prospect work has been spread over a somewhat large area with varying success, ore being found in most of the working, but in limited

The strike which is now attracting attention has been made where the vein crops at the surface a short distance orth of the dwelling built on the south claim, some 3000 feet beyond the point. What is particularly pleasing is that

the vein appears to be vertical, the other veins in that section being more or less flat. It is true contact between limestone on the east and shale on the west. The filling is seven feet of quartz, shot full of galena. At six feet from surface a six-inch streak of lead ore was encountered, which at sixteen feet in depth has widened to two and a half feet or more of heavy galena, with some five to six feet of quartz filling, the full extent of the quartz not being yet known. The white lime to the north and east is country rock, then comes black lime varying in thickness from twenty to forty feet; then comes the quartz, which the ore is found, and the shale

lies to the west.

The strike of the vein is southeast and porthwest and all conditions point to

The backers of the present work are expected to arrive from Salt Lake within the next few days to inspect the new development and to determine upon future workings. SOME BOSTON TALK

ON MINES OF UTAH

The directors of the Utah Consolldated were scheduled to declare a diviwork on the St. Louis mining claim in | dend of \$1.50 on that company's capital work on the St. Louis inning claim in Culverwell mining district, four miles stock on Friday, and report has it that east of Caliente, and has opened a the U. S. Mining directors will meet today to declare the first dividend on that stock, says the Commercial Bulletin of

Utah has been one of the strong coppers and has been bought stendily by New York, U. S. Mining has been very quiet, but the stock is not pressing fo sale, and when it enters the dividend list and the general market improves it ought to get active and sell higher.

Mining Notes.

W. J. Craig, superintendent of the Yampa, left for that Bingham proposition yesterday morning. Lawrence Greene has gone to Challis, Ida, with his family and will absent him-self several weeks.

Hon. Lafe Pence came down from Ida-ho yesterday, on his way east, where he will consummate a big deal which means much to the commonwealth.

Between the payroll at the Centennial Eureka of Tintle and the system of mines at Bingham, the management of the United States Mining company has approximately 400 persons to whom to issue checks each month this not inclusive of the number employed at the smeiter.

Ophir canyon leaves for the East today to absent himself several weeks. Harry Hague, who has been attending the School of Mines at Golden, Colo., has returned from that State to visit with his parents.

Manager Ryan of the Montana group o

Alviras E. Snow left for Tintic last night to inquire into the progress of ments at the Martha Washington The management of the Tetro of Tintic marketed 161 tons of ore vesterday on controls showing 22.2 ounces silver and 24-per cent lead per ton.

Newt Dunyon has submitted a report of the Star Con. of Thate to President H G. McMillan. It is what has been previ-ously exploited for some time.

It is Easy to Make Good Ice Cream

Contracted Disorders thorough. Not one of our patients has ever had a relapse after being discharged as cored, and we cure in less time than the or-dinary forms of treat-ment require.

Specific Blood Poison. Ne dangerous minerals to drive the virus to the interior, but harm-less, blood-cleaning remedies, that remove the last poisonous

WEAK MEN

So called "Weakness" in men is merely a symptom of chronic inflammation in the pressure gland, brought on by early dissipation or by the improper treatment of some contracted disease. A complete and radical core is therefore, a question of restoring the prostate gland to its normal state, and this we accomplish promptly and completely without the use of internal remedies. Our treatment is a local one entirely. It is original and scientific, and has been proven absolutely affective by thousands of tests. We are convinced that by no other methods can full and riger be accomplished.

Cures quick and radical has to to 60 days, by my own fa-mous method.

Completely and permanenty cured by my new po-cess; all disagreeable sym-toms soon disappear co-pletely and forever; it safe, painless and blocdes. An absolute cure guris teed.

Varicocele

HOME CURES BY MAIL.

We make a specialty of curing pattents by mail. We have cared thousands we have seen us personalty. If you are afflicted and cannot call, write us for advice and the gratem blanks and we will gladly advise you regarding your case, free of charge.
